## **Big Data analytics**

**Learning Objective:** The main goal of this course is to help students learn, understand, and practice big data analytics approaches, which include the conceptualization and summarization of big data and machine learning, and big data computing technologies.

### **Learning Outcome:**

- Ability to identify the characteristics of datasets and compare the trivial data and big data for various applications.
- Ability to solve problems associated with batch learning and online learning, and the big data characteristics such as high dimensionality, dynamically growing data and in particular scalability issues.

### **Theory Component:**

|                                                  |                                  |

## Linear Algebra

### Learning Objectives:

To offer the learner the relevant linear algebra concepts through Data science applications.

### Learning Outcomes:

- Appreciate the relevance of linear algebra in the field of computer science.
- Understand the concepts through program implementation
- Instill a computational thinking while learning linear algebra and linear programming.
- Linear Programming (LP), also known as linear optimization is a mathematical programming technique to obtain the best result or outcome.

## **Data Visualization**

Learning Objectives:

- To apply the functionality of the various data visualization tools and techniques
- To understand visual perception, visual representation of data

- To understand and apply various classification and prediction techniques using tools.
- To study and apply Visualization of groups, trees, graphs, clusters, networks on data set.
- To understand Mining of Object, Spatial, Multimedia, Text and Web Data.

Learning Outcomes: -

- Analyze the visual representation of data on time series and statistical data.
- Apply visual mapping, visual analytics,
- Design of visualization applications
- Analyze the Classification of visualization systems and metaphorical visualization.

## **Data Storage and Management**

**Learning Objectives: -**

- Understand the types of storage systems.
- Utilize redundant array of independent disks (RAID) technologies effectively
- Understanding the positioning of data at various level of memory hierarchy.
- Learning Distributed data base system, Mango DB, Storage architecture, AN.

**Learning Outcomes: -**

- Analyze the data center requirements for a business setup and apply the right information cycle
- Apply the best storage configuration in distributed environment.
- Select the best techniques for facilitation backup and recovery of lost or corrupted data
- Design, analyze storage systems and select an optimal storage network
- Design and compare cloud storage setup for efficient business transaction setup

**Theory Component:**

**List of Practical:** Implement using R/Python Programming.

1. Write a program which demonstrates the following:
  - a. Addition of two complex numbers
  - b. Displaying the conjugate of a complex number
  - c. Plotting a set of complex numbers
  - d. Creating a new plot by rotating the given number by a degree 90, 180, 270 degrees and also by scaling by a number  $a=1/2$ ,  $a=1/3$ ,  $a=2$  etc.
2. Write a program to do the following:
  - a. Enter two distinct faces as vectors  $u$  and  $v$ .
  - b. Find a new face as a linear combination of  $u$  and  $v$  i.e.  $au+bv$  for  $a$  and  $b$  in  $\mathbb{R}$ .
  - c. Find the average face of the original faces.
3. Write a program to do the following:
  - a. Enter a vector  $u$  as a  $n$ -list
  - b. Enter another vector  $v$  as a  $n$ -list
  - c. Find the vector  $au+bv$  for different values of  $a$  and  $b$
  - d. Find the dot product of  $u$  and  $v$
4. Write a program to do the following:
  - a. Enter an  $r$  by  $c$  matrix  $M$  ( $r$  and  $c$  being positive integers)
  - b. Display  $M$  in matrix format
  - c. Display the rows and columns of the matrix  $M$
  - d. Find the scalar multiplication of  $M$  for a given scalar.
  - e. Find the transpose of the matrix  $M$ .
5. Write a program to do the following:
  - a. Find the vector-matrix multiplication of a  $r$  by  $c$  matrix  $M$  with an  $c$ -vector  $u$ .
  - b. Find the matrix-matrix product of  $M$  with a  $c$  by  $p$  matrix  $N$ .
6. Write a program to enter a matrix and check if it is invertible. If the inverse exists, find the inverse.
7. Write a program to convert a matrix into its row echelon form
8. Write a program to find Eigen values and vectors
9. Write a program to implement gaussian elimination method.
10. Write a program to implement concepts of orthogonalization.

|                                                  |                                   |
|--------------------------------------------------|-----------------------------------|
| <b>M. Sc (Data Science)</b>                      | <b>Semester – III – SIPSDSP33</b> |
| <b>Course Name</b>                               | <b>Data Visualization</b>         |
| <b>Periods per week (1 Period is 60 minutes)</b> | <b>4</b>                          |
| <b>Credits</b>                                   | <b>2</b>                          |

**List of Practical:**

- 1) Demonstrate a nonobvious insight gleaned from the data, or to make a particular point. You can stick with a single chart or other type of visualization, or you can use multiple displays that together tell a story. To create your visualization(s) you can use the simple tools - spreadsheet graphing tools (e.g., Google Sheets, Excel), Tableau tool, or any other method of creating a visual point or story from the data.
- 2) Demonstrate Time series and statistical data graphics using visualization tool.
- 3) Generating visualizations of map-based data.
- 4) Finding data There are many sources of freely downloadable data. Locate a relevant data set online.  
Here are some places to start:
  - LION: <http://www.nyc.gov/html/dcp/html/bytes/applbyte.shtml>
  - Newman Library: [http://guides.newman.baruch.cuny.edu/nyc\\_data](http://guides.newman.baruch.cuny.edu/nyc_data)
  - NYC Open Data: <http://data.cityofnewyork.us>
  - Wiki: <https://wiki.gephi.org/index.php/Datasets>

Demonstrate temporal component, showing change over time.
- 5) Demonstrate visualization of one, two and multi-dimensional data.
- 6) Visualizing tenure, monthly charges, total charges, and other individual columns using a scatter plot
- 7) Demonstrate visualization of text and text documents.
- 8) Create a Map view with appropriate data set using tableau.
- 9) Demonstrate Metaphorical visualization.
- 10) Demonstrate visualization of groups, trees, graphs, clusters.
- 11) Demonstrate collaborative visualization

|                                                  |                                    |

| <b>M. Sc (Data Science)</b>                      | <b>Semester – III – SIPS DSP34</b> |
| <b>Course Name</b>                               | <b>Data Storage and Management</b> |
| <b>Periods per week (1 Period is 60 minutes)</b> | <b>4</b>                           |
| <b>Credits</b>                                   | <b>2</b>                           |

**List of Practical:**

1. Demonstrate the Read/Write time of data from various storage devices ( Pend Drive, HDD, CD/DVD)
2. Demonstrate the Usage and Access of data positioned at various level of memory hierarchy.
3. Build an application on private cloud.
4. Demonstrate any Cloud data storage Monitoring tool.
5. Implement FOSS-Cloud Functionality - VDI (Virtual Desktop Infrastructure)
6. Demonstrate Distributed Relational Databases
7. Demonstrate Non-relational Distributed Databases
8. Demonstrate parallel data base in peer-to-peer environment.
9. Implement FOSS-Cloud Functionality - VSI Software as a Service (SaaS).
10. Explore Working of the following with Virtual Machines-
  - a. VM Lifecycle
  - b. Creating VMs
  - c. Accessing VMs
  - d. Assigning VMs to Hosts
11. Explore Service Offerings, Disk Offerings, Network Offerings and Templates – In open source Cloud technology

## **Deep Learning**

### **Learning Objectives:-**

- To know importance of deep learning
- To acquire knowledge on the basics of neural networks.
- To implement neural networks using computational tools for variety of problems.
- To explore various deep learning algorithms

### **Learning Outcomes: -**

- Develop algorithms simulating human brain.
- Analyze ANN learning and memory-based learning
- Explore the essentials of Deep Learning and Deep Network architectures.
- Define, train and use a Deep Neural Network for solving real world problems that require artificial Intelligence based solutions.
- Use deep learning methodology in real world application

### **Theory Component:**

## Web and Social Network Data Analytics

### Learning Objective:

- To introduce the concepts of Web and Information Retrieval and Web Mining in Social Network.
- To study the basic concepts of Social Network Analysis.
- To interpret Social networks through mathematical representation.
- To analyze relations, descriptive measures and models to overview research questions related to Social Networks.

### Learning Outcome:

The students will be able to:-

- Choose and analyze various Information Retrieval Models and in turn will be able to develop Information Retrieval Systems
- Gather relevant network data, and some of the associated questions and problems.
- To build various applications based on Social Network platform.

### Theory Component:

|                                                  |                                              |

| <b>Periods per week (1 Period is 60 minutes)</b> | <b>4</b>                         |
| <b>Credits</b>                                   | <b>2</b>                         |

**List of Practical:**

- 1) Demonstrate Gradient descent and the back-propagation algorithm.
- 2) Implement ReLU Heuristics for avoiding bad local minima.
- 3) Demonstrate Image segmentation, object detection.
- 4) Demonstrate automatic image captioning, Image generation with Generative adversarial networks.
- 5) Demonstrate video to text with LSTM model.
- 6) Demonstrate Neural Summarization using NLP
- 7) Demonstrate similar question detection using NLP.
- 8) Demonstrate Auto encoders using Deep Unsupervised Learning.
- 9) Demonstrate Variational Auto encoders.
- 10) Demonstrate Dialogue topic tracking.
