

Use of Experiential-participative teaching-learning methods 2023-24

(2.3.1 Student-centric method for enhancing teaching-learning experience in 2023-24)

Student-centric teaching-learning methods are used to enhance the learning experience. A survey was conducted to learn about the innovative teaching-learning methods used by teachers during 2023-24. It was found that most of the teachers used the following techniques:

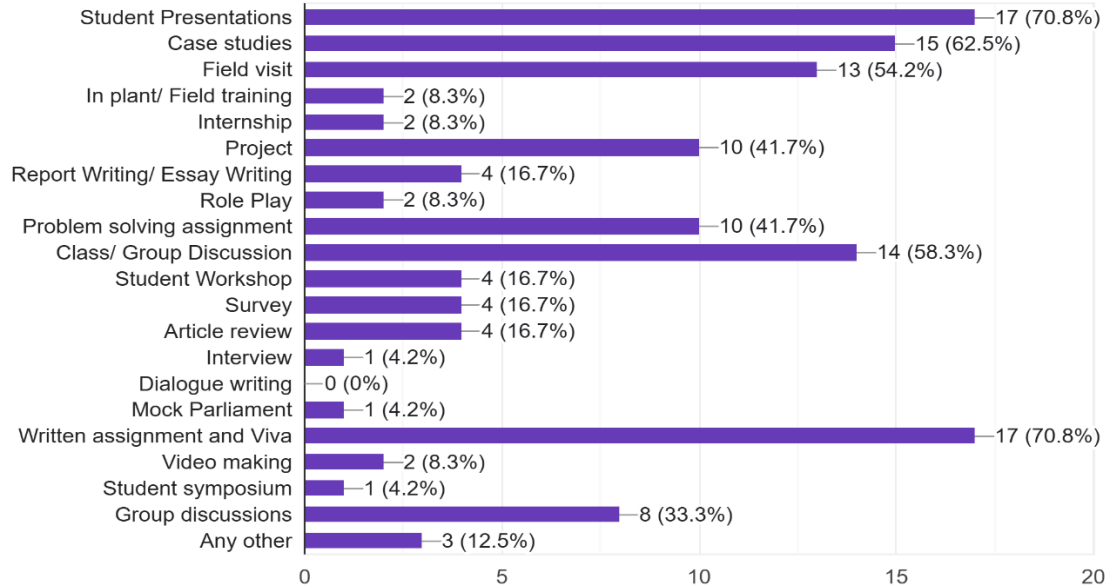

- Classroom discussions
- Written assignments and viva based on it
- Student presentations
- Problem-solving assignments
- Field-visits
- Report writing
- Essay writing
- Case-studies

Poster presentations, field projects, and field-based surveys were also used to make students aware of real-life requirements and challenges. Some methods such as PowerPoint presentations, written assignments and viva, essays, projects, report writing, case studies, field visits, internships, and research studies were used for internal assessment. As a part of learning, students are encouraged to apply what they study in the classroom to real-life situations. Many students got an opportunity to work on real-life problems to understand the application of theoretical knowledge. Students work in groups and discuss the topic-related problem. This participative method acts as an active learning method and helps them to learn from each other through continuous active engagement.
